

Phoenix PDT™ Pulse Detonation Turbine

The Engine that Cleans the Air as it operates.

Using our ultra-lean Pulse Detonation Turbine cycle, up to 99.99% of ANY fuel is burned - including combustible materials suspended in incoming air! Like a powerful vacuum cleaner, the Phoenix PDT™ Turbine ingests particulate matter & toxic hydrocarbons, drawing them in and rendering them into nontoxic gases.

More Power	Less Pollution	Lower Cost
Efficiencies better than any known engine today.	Only engine that ingests more carbon than it emits.	Manufacturing costs as low as piston engines.
Power to weight ratios higher than piston engines	Not only burns cleanly, but cleans the air of toxic hydrocarbons!	No exhaust treatment necessary.
Thrives on combustion cycles that destroy other engines	1,000 times cleaner burning than diesels	No exotic materials or processes.
This thermodynamic engine will gain MORE efficiency over time!	Never needs to be replaced or melted down	Near-zero maintenance.
		World's only "Unlimited Life" engine! Lasts a lifetime

The world is ready for a NEW prime mover! This engine is currently in development. Investors looking for the next-generation replacement for automotive ICE's contact:
